

IN THE SPECIFICATION

Please replace the paragraph beginning at page 42, lines 10-17, with the following amended paragraph:

As described above, the selected CD 171 is easily and smoothly reproduced at the same position as the position ~~held~~ held on the selected tray 2. Therefore, it is not necessary to produce a clearance by moving the CD in the ~~plane~~ planar direction as done in the conventional method shown in Figure 35. Further it is possible to decrease the ~~side~~ size of the apparatus and thereby ~~making~~ make the apparatus small in size.
